

Consulting Services Engineered for Sequestration Budgets

Thought Leadership Report

Cost Effective Virtual Program Drives Performance Gains at Low Cost and Low Impact

The Budget Control Act (aka Sequestration) has robbed funds and resources from hard working federal civilian and military organizations, while the expectations of organization's missions remain the same and in some cases, even more demands are being placed on organizations. How can organizations acquire needed skills and best practices to implement performance improvement tools and techniques in order to produce results now and over time on a shoestring budget?

The Virtual Performance Improvement Engagement

MainStream GS (MainStream) has developed a low cost, low impact service that is generating high returns for clients. Leveraging virtual conferencing technology that is free to clients to use MainStream Senior Management Consultants can work remotely with clients to provide consulting and knowledge transfer and share industry best practices on proven approaches for performance improvement. Sessions can be conducted for groups or one-on-one to client personal workstations or tablets. Moreover, this service model can be conducted on a part-time basis over time based upon the schedule of the client. Sessions can be consolidated or spread out over time. Clients have an opportunity to work on assignments and report back to the MainStream team to get feedback on their progress, where they can improve, and recap what they are learning.

Tailor a Schedule that has Low Impact on your Workforce and High Return for your Team

In one specific engagement, the client provided their own custom problem set and learning curriculum. MainStream ramped up on their material in order deliver consulting, training, and knowledge transfer. In addition to the client's proprietary training material, MainStream added industry best practices acquired from over a decade of solving similar challenges for near peer clients. Sessions were scheduled when most convenient for the client and feedback was exchanged both live online and via email.

Cost Effective Engagement Allows for Streamlined Acquisition

MainStream's cost effective programs allow for streamlined acquisition on GSA MOBIS or other vehicles most convenient for our clients. The

program can be configured to provide a combination of one-on-one and group consulting over the web. One of MainStream's clients are getting almost ten people trained and mentored over a period of a few months at the cost of what traditionally might have been for one person for a few weeks.

MainStream GS is available for a consultation today to help you understand if this cost effect, results focused virtual program might benefit your organization. Contact MainStream GS at info@mainstreamgs.com or 877-785-4888.
